DUMMY ROUTINES

The following routines have dummy versions in the MJS libraries. The dummy version of each routine is in a module whose name is a concatenation of D and the routine’s name.

**DDODP**  
Dummies all plotting.  
Note that since only one type of plotting can be done, including ODDPLT, DODP, or ENGPLT will automatically exclude the other types of plots.

**DPLSANL**  
Dummies out all normal plasma analysis.

**DMJSFIT**  
Eliminates the non-linear fitting.

Note that loading a dummy routine will prevent the loading of the normal routine. Thus, even if the flags are set to do that type of processing, it will be dummied out. Loading a dummy routine both speeds the loading and decreases the required storage.
